

OETIO – Pipeline Training OETIO [Media Alternative]

Summary: This video highlights how pipeline installation takes place at the OETIO Morrisburg Campus

Content:

Electronic Music plays as we see a wide shot of the OETIO Morrisburg Campus. We see various machines and large scale pipelines sitting outside ready for installation. We see multiple machines working together to carry pipelines to their respective install locations.

We cut to some dozers and excavators moving earth. The dozers flatten out the land while the excavators dig out the pipelines.

Heavy Machinery bring the pipe over to the jobsite. The length of the pipe requires two machines for transportation. Once onsite, the operators work in tandem to lower the pipe into the earth. They are lifted back out as this is a training demonstration on the OETIO Morrisburg campus.

Once removed, the pipe is taken away. The video ends.
