

## Excavation and Backfill Timelapse OETIO [Media Alternative]

**Summary:** This video showcases a John Deere Backhoe excavating a hole as a technical exercise in the OETIO Morrisburg campus. Once the excavation is complete, the operator fills the hole back up.

**Content:**

The video opens with calm, ambient, electronic music. We see a John Deere Backhoe positioned in the OETIO Morrisburg campus as a Heavy Machine Operator begins to dig a hole. After some digging, the operator pauses to reposition himself. He proceeds to dig another hole beside the first hole. The new hole becomes big enough to merge with the first hole. He proceeds to continue digging. He repositions the Backhoe for a second time and expand the hole. It begins to resemble a rectangular pit. After cleaning out the edges of the pit, he moves the Backhoe to fill up the freshly excavated pit for the next student.
